2016 TEST OF TIME AWARD
The Associated General Contractors (AGC) of North Dakota Headquarters Building
2016 TEST OF TIME AWARD

The organization's permanency, loyalty and good faith of each and every member.

The earth is all that stands between infinity and me.
- Woiwode, Kathleen Norris

The curvature of the dome of sky overhead. It has inspired writers and poets to express their love of the land and the home place - continue that fierce love of the land and the vernacular traditions and the practical realities dealt to the homesteaders.

Gottfried Semper's four building elements (the pragmatic, and spare. More recently, German architect Hermann Muthesius described the Great Plains. It left a vast and rugged beauty, an endless landscape stretching 96'-6" east-west and 24'-0" north-south.

Lorna Meidinger, State Historical Society

In 1936, the Works Progress Administration (WPA) constructed the Beulah Civic Center in Beulah, North Dakota, as part of the New Deal. The Civic Center was designed by the architectural firm of Zeeland Hall, which was located in Grand Forks, North Dakota. The Civic Center was constructed as a public works project and was intended to provide employment for unemployed workers during the Great Depression.

The Civic Center was built in three sections as the Grand Forks Civic Center, the Beulah Civic Center, and the New Deal Civic Center. The Beulah Civic Center section was located on the north side of the site and included a gymnasium, auditorium, and community center. The Grand Forks Civic Center section was located on the south side of the site and included a library, reading room, and community center. The New Deal Civic Center section was located in the center of the site and included a central administration building, administrative offices, and a garage.

The Civic Center complex included a gymnasium, auditorium, community center, library, reading room, and administrative offices. It was designed to be a multi-use facility that would serve the community for many years to come. The Civic Center was designed to be functional and efficient, with a focus on providing a comfortable and inviting environment for community members to use.

In addition to providing employment and housing for skilled workers during the Great Depression, the Civic Center also served as a social hub for the community. It was a place where residents could come together for events and activities, such as concerts, plays, and lectures. The Civic Center was a symbol of hope and progress during a difficult time in history, and it continues to serve as a valuable resource for the community today.

The Civic Center complex was added to the National Register of Historic Places in 1997. It is an important example of public works architecture and a testament to the ingenuity and hard work of the workers who constructed it.

By expanding “design” from its aesthetic sense to incorporate people, society and quality of life issues, we shift the paradigm of architecture from the design of buildings to influencing the “design” process for solving problems in society.

~Richard Sweet, FAIA

Most people are unaware of the significance city planning and architecture play in the prosperity of their communities’ economic and social development. City design, community event centers, hospitals, and nursing homes offer subtle yet profound ways that help or diminish a given community. From how we design neighborhoods and schools to facilitating commerce and industry, how we utilize the space and grounds on which they are built have larger impact on the future of our state and region.

We are all accountable and responsible to our communities. Architecture is more than aesthetic design. Architects are expected to create sound structures of lasting value. While great looking buildings are important, architects also shift that traditional paradigm to be part of the larger process of problem solving. They are both problem solvers and contributors to shaping our communities.

No design task is inconsequential or exists in a vacuum. From restoring important historic buildings to schools designed for maximum learning, all should include the highest standards of efficiency and respect. Design also has a cultural dimension—bringing together clients, owners, and contractors into an integrated and creative delivery—to create a larger blueprint for team leadership.

We hope you enjoy this year’s submissions by our members which represent both public and private-sector projects. As our North Dakota communities continue to grow, now more than ever is the time to plan holistically how to best develop our centers of human activity for the present and beyond.

Come on in and welcome!
Steve C. Martens and Ronald H.L.M. Ramsay

CELEBRATING THE BUILDINGS OF NORTH DAKOTA

A lot of changes have unfolded since Ron Ramsay and Steve Martens were approached 15 years ago, with a request from the Society of Architectural Historians to develop a book about the Buildings of North Dakota (University of Virginia Press; April 2015.) Since finally appearing in print in 2015 as part of a national series of books illustrating the architectural heritage of each state, this book provides a comprehensive snapshot overview of North Dakota at a watershed moment of changing visions. The authors have been privileged to place their interpretation of local history and architectural heritage before a receptive national audience. Editors and publishers for the book series commented, “it is apparent that Martens and Ramsay are very enthusiastic about the richly diverse architecture and beautiful settings in communities in all parts of their home state, and respectful of the state’s best architectural work.”

In a sense, the book is written for an audience of design professionals and those who appreciate the history of our state – from small towns and from outside our region, who may be surprised to discover how rich, diverse, and innovative architecture can be. “We’ve done our best to treat the architecture-consuming public and future generations of potential architects with respect, in terms of showing them how good architecture goes beyond safe, economical, efficiently functional design to create lasting beauty, inspiring and expressing the best about our values as a society.” Ron Ramsay observed, “these are community values. Architecture is a lasting investment by each generation in meaningful places that are important to everyone. Approaching the topic of architectural history from a humanities perspective has proven an effective way of engaging a broad public in understanding local history and appreciating cultural heritage.”

The book’s narrative is crafted to foster interest and understanding by telling the story of familiar and unfamiliar buildings and landscapes in a way that celebrates North Dakota’s richly diverse cultural heritage. In addition to academic sales direct from the publisher, regional bookstores (as well as the State Historical Society and state tourism department) have made the reference guidebook available locally to popular audiences in all parts of the state. Outside the state, North Dakota once conjured simplistic visions of
a remote, sparse, and seemingly inhospitable landscape, replete with ghost towns, scattered farmsteads, and abandonment. But people who live here, or visitors who take the time to look critically, realize that North Dakota’s architectural heritage is supplemented by very successful contemporary work. Tom Mayes, Vice President and Senior Counsel for the National Trust for Historic Preservation commented, “I picked up this guidebook as soon as I arrived in Bismarck, and that afternoon when I drove out to the University of Mary/Annunciation Priory I could hardly believe the power and impact of world-class architecture in a state I knew too little about.”

The 264-page book is organized into six driving tours with distinct interpretations of each region, describing more than 400 buildings and landscapes along with 250 photos. The book is further supplemented with a free of cost internet resource – under the heading “Archipedia” – that serves as a browser or introductory sampler for 100 “classic” North Dakota buildings. “The current generation of architectural firms should know where they stand with respect to the long lineage of the profession in North Dakota,” Steve Martens commented. “Thoughtfully designed buildings and landscapes in all parts of North Dakota improve the quality of life, bring delight, and add to our understanding about lasting cultural values in our communities. We’ve tried to explain in the book why these buildings and landscapes will stand the test of time.”

North Dakota’s architectural heritage from the past 150 years receives substantial emphasis in the book, but the authors faithfully approach buildings and landscapes in every part of the state in a way that encourages public awareness about the best, most lasting achievements both past and present. For two architectural historians, traveling to every county in the state to photograph and research significant buildings and landscapes was a real bonus. Martens added, “we especially appreciated the openness of many architecture firms in the state; providing us with information about wonderful contemporary architecture that merits greater public awareness. North Dakotans have been well-served by the architectural profession, so we’ve tried to showcase work by as many architectural firms as we possibly could. This book is a once-in-our-lifetime opportunity to show and focus on those achievements.”
AIA North Dakota, a chapter of the American Institute of Architects, awarded four $1,000 scholarships to students in the Department of Architecture and Landscape Architecture at North Dakota State University (NDSU). The scholarships were presented by AIA North Dakota’s President Steve Tabor, AIA at the Awards Banquet in October as part of the annual convention.

Recipients were recognized for excellence in design and/or design combined with services to the profession. The funds were made available through a joint program sponsored with AIA National and AIA North Dakota. AIA North Dakota would also like to thank Russ Hanson with the AGC of North Dakota and Brett King with the Natural Stone Veneers International for their contributions to this year’s scholarship award program.

Pictured with AIA ND President Steve Tabor (far right) are the 2016 Scholarship Winners:

From left to right: Mark Barnhouse, AIA (NDSU), Cindy Urness, AIA (NDSU), Gretta Berens, Dominic Blindert, Nicholas Braaksma, and Aaron Codden
Kathy Achelpohl, AIA, LEED AP BD+C

Kathy’s career as an architect has spanned 20+ years, working with design-focused firms in both project leadership and firm-wide management roles. Her national portfolio is focused on institutional clients, and she is recognized for her industry-leading expertise in higher education, cultural and sustainable design projects. Kathy’s practice has included working with three firms that received the AIA National Architecture Firm Award. Currently her practice is focused in Kansas City, where she is a member of the leadership team at PGAV Architects and on the faculty at the University of Kansas School of Architecture, Design and Planning.

The North Dakota State Historical Preservation Review Board (NDSHPRB) approved four properties, one new National Historic Landmark (NHL).

- Zeeland Hall in Zeeland
- Creaser Building in Williston
- St. Michael’s Parochial School in Grand Forks
- Black Building in Fargo
- Biesterfeldt in Ramsey County (NHL)

The National Register of Historic Places is the nation’s list of properties considered worthy of preservation. The documentation process for listing demonstrates that the resource is significant in some aspect of the nation’s history. Contrary to some misconceptions about the National Register program, listing in it does not prevent owners from altering their property, restricting the use or sale of the property, or establish times requiring that the property must be open to the public. Entry into the National Register of Historic Places does give a property prestige, provides protection from federally-assisted projects, and provides eligibility for certain preservation financial incentives.

North Dakota Properties listed in the National Register of Historic Places in 2016

by Lorna Meidinger, State Historical Society and Bobbi Hepper Olson, Hepper Olson Architects.

The North Dakota State Historical Preservation Review Board (NDSHPRB) approved four properties, one new National Historic Landmark (NHL).

- Zeeland Hall in Zeeland
- Creaser Building in Williston
- St. Michael’s Parochial School in Grand Forks
- Black Building in Fargo
- Biesterfeldt in Ramsey County (NHL)

The National Register of Historic Places is the nation’s list of properties considered worthy of preservation. The documentation process for listing demonstrates that the resource is significant in some aspect of the nation’s history. Contrary to some misconceptions about the National Register program, listing in it does not prevent owners from altering their property, restricting the use or sale of the property, or establish times requiring that the property must be open to the public. Entry into the National Register of Historic Places does give a property prestige, provides protection from federally-assisted projects, and provides eligibility for certain preservation financial incentives.

In 1936, Works Progress Administration (WPA) funds helped build the Zeeland Hall. This community center is significant for its Colonial Revival architecture, its connection with federal work relief construction programs from the Depression Era, and for its rich heritage as the location of many community events, such as movies, sporting events, weddings, and dances throughout its history. The Zeeland Hall has a rectangular form 58' by 98', with one-story wings flanking the higher central section, with exterior walls of poured in-place reinforced concrete finished with stucco. The most notable feature of the exterior is the west side wooden bell tower, finished with rounded arches on all four sides and capped with pyramid roof.

Zeeland Hall

New National Historic Landmark (NHL). The NHL Program uses the same criteria for listing as the National Register of Historic Places but has the additional requirements that the historic place be significant at the national level and that it possesses a high level of historic integrity. There are currently more than 2,500 NHLs in the United States and seven of them are in North Dakota.

The Creaser Building on the corner of Main Street and Broadway in Williston is being nominated for its architecture. Built in 1916, this striking early commercial brick building has distinct cream and red brick bands running horizontally along both street sides. It also has pilasters separating bays and diagonal blond brick centered near the top of each bay. The two-story structure with full basement is of masonry construction stretching 96’-6” east-west and 24’-0” north-south. The building’s early long-time tenants were Creaser Drug, J.B. Lyon’s Women’s Wear Exterior and the Colonial Shop. Architect/Builder as listed on the nomination: Stacy-Judd of Minot.
At this time, the North Dakota State Historic Preservation Office does not have an online, searchable database of listed properties. The National Park Service maintains the National Register of Historic Places database, which can be accessed here: http://nrhp.focus.nps.gov/natreghome.do?searchtype=natreghome.

For a basic search:
- For all properties listed in North Dakota, leave the "Resource Name" field blank and only fill in the State.
- For all properties listed in a specific county in North Dakota, leave the "Resource Name" field blank but fill in State and County.
- To search for a specific site, enter one part of the resource name. For example, enter "bridge" to search for Sorlie Bridge in Grand Forks, or enter "Mansion" to search for the Former Governor's Mansion (officially known as the Former Executive Mansion), in Bismarck.

For now, resources that are within a listed historic district are not searchable. If you want to check if a property is within an historic district, please call the Historic Preservation Division at 701.328.2089 and have the property's street address at hand.

---

**St. Michael’s Parochial School** in Grand Forks was built in three sections as the needs of the school and of the local community changed. The original 1916 school was designed by William J. Edwards and built by the Dinnie Brothers, the 1949 Youth Center and the 1953 addition that connected the Youth Center to the school were designed by Ursa Louis Freed. The original school building is an example of a combination of Romanesque and Colonial Revival architecture; the 1949 and 1953 portions of the complex exemplify the unadorned post-World War II modernist architecture. This school complex tells the story of parochial education and shows the transition from early 20th Century school architecture to mid-Century modernist architecture. The school complex shares the block with St. Michael’s Catholic Church and Parish House. Architect/Builder as listed on the nomination: W.J. Edwards, architect; Dinnie Brothers, contractors/builders; and Ursa L. Freed, architect.

**The Black Building**, constructed from 1930 to 1931, in Fargo was already recognized as one of the most significant historic properties within the Downtown Fargo Historic District, but the owners chose to pursue the honor of individual listing for its architecture and for its association with George Mumford Black and his strategies in commerce and communications. Black had the upper floor of the Art Moderne building designed for WDAY radio and ensured the station signed off each show with “This is WDAY in the Black Building, Fargo” and he is credited with creating the one-cent sale. This building is an eight-story structure constructed of cast in place concrete and faced with Indiana limestone on the main façade and light color brick on its other three sides. Over the years, the interior has had extensive renovation work, but the exterior has retained most of its historic integrity. Architect/Builder as listed on the nomination: Lang, Oscar/Lang, Raugland & Lewis; Braseth and Houkom; T.F. Powers and Co.

**The Biesterfeldt Site** in Ransom County, North Dakota, is an earth lodge village site culturally identifiable as having been occupied by the Cheyenne Indians ca. 1724-1780. As the only known representative of that relatively brief period in their history during which they pursued a horticultural way of life, the archeological site has the potential to yield critical information on the history of that tribe and various neighboring tribes. Biesterfeldt also has the potential to inform us about the development of Plains Indian culture during a period of intense and dramatic change. (As described by the Office of the Secretary of the Interior)

**Specific Use of Project:**
Student dining services and central campus food production. Student life support including mail and package services, counseling spaces, student organization meeting and work rooms, computer lab, performance venue and café, C-store, gaming, lounge and study areas, central lounge fireplace, and Innovation Lab. Large multi-use dining space and several reservable meeting rooms for entire campus use. Outdoor covered bicycle parking, plaza and gathering space, outdoor firepit.
Summary of Principal Features

As a dining facility, principal features include a campus food production kitchen; a daily food production kitchen for Wilkerson diners; open servery; chef’s demonstration station; main dining space; and a large 100 person private dining room. The lower level has a grab-n-go counter and a coffee bar.

As a student support center, Wilkerson provides a student help desk; mailboxes for five residence halls and package pick-up window for the entire campus; C-store; lounge and study spaces; gaming alcove; Innovation Lab with private breakout rooms and tons of interactive technology; computer lab, meeting rooms, and a small performance area with a stage. Outdoor space is also enhanced through a firepit and plaza.

Staff are provided a break area and shift gathering space and small kitchenette; as well as a full locker room and toilets and showers.

Jury’s Comments

The architect is commended for their skillful addition to an octagonal campus dining hall from the 1960’s – not an easy assignment. The addition appears as a taut wrapper around three segments of the original structure. A broad palate of exterior materials – brick, metal panel, cementitious panel, terra cotta, stone veneer and glass – are successfully balanced and well-detailed. The building’s interior is bright and attractive. Spaces for students are designed with a high level of care and creativity. Also notable is the integration of the 2-story addition with the sloping site. Landscape and hardscape elements effectively resolve the grade changes and enhance the interior and exterior spaces of the lower level.

Specific Use of Project:
Single Family Residence
Summary of Principal Features

Iconic gable forms cascading down the hill, barrel-roof white interiors, a stepping of the zones to accommodate the grade (public blue), private (yellow), utilitarian (red) moving from the lake to the road), a color coding of the "zones", a 6’ step of each colored gable to allow for views from all spaces to the lake, creative use of punched openings to manage views and privacy and light and budget, a simplistic approach to the landscape allowing for an emerging of the form from the landscape, a “maintenance-free” exterior, energy efficient heating and cooling, low operating costs.

Jury’s Comments

The narrative from the architect says it all: their client handed them a sketch and a photo of a Scandinavian fish camp and challenged the firm to design a simple, yet beautifully executed idea. In this surprising house by the lake, the architect – with their client - did just that. The three “perfect” cubes are an artful composition, stepping down the narrow site and staggering in plan to create views and provide access. The clearly articulated forms and bright colors of the cubes are not easily forgotten, but once inside, the interior makes an equally bold statement, speaking its own language of simplicity and the beautifully executed idea.

2015

Specific Use of Project:
Office, maintenance and storage facilities for Highway Department, Weed Control and Vector Control. The project allows the Highway Department, Weed Control, and Vector Control to be housed in within one building and site with the ability to share common spaces. The building consists of open office space, a training room and large meeting hall, conference rooms, crew rooms, lockers, labs, storage space specific to each department, and large shop and maintenance space for each department.
Summary of Principal Features

The building is organized with a primary south orientation to maximize views, take advantage of solar heat in the winter, and to provide comfortable entrances. A central hub provides a strong architectural focus at the point of entry, and houses offices and meeting spaces shared by all departments. Two shop wings branch off of this main core. The design focus is on the longevity of materials and the industrial nature of the shops. Aesthetics are modern, while relating to the surrounding context and history by making subtle references to agricultural forms and materials.

Jury’s Comments

The architect elevates this utilitarian facility to a new level through a design approach which emphasizes people and place. The central hub, which contains the entrance and offices, successfully appropriates a barn/rural vernacular and provides a strong architectural focus to the building. The façade, which could have been dominated by garage doors, is handled quite well. Overall, the complex represents a successful resolution of long and short span structures along with accommodating multiple users (people and vehicles). The work spaces are designed to honor those who work in the facility with daylight and functionality. Details, such as task lighting in the truck bay, were noticed.

Specific Use of Project:
Place of Worship
Summary of Principal Features
A new front entry and steeple, additional fellowship space with wood ceiling as a cost-conscious nod to the existing Glu-lam/T&G wood deck of the original fellowship, integral “cross” motif at the steeple/window patterns/interior entry hearth, addition of windows to existing under-lit spaces, new ADA bathrooms, flexibility of three zones to create one large gathering space: providing a large gathering post-worship services; a lounge/entry space to accommodate expansion of seating during services and a flexible post-service space for meals and/or large group classroom space.

Jury’s Comments
The architect has successfully designed what was not easily possible – a striking addition to an unassuming mid-century modern church which completely transforms the entry experience – and more – on a tight budget. This ingenious solution creates a symmetry on the exterior façade by assimilating the lower portion of the original structure. The existing palette of modest materials is thoughtfully transferred to the addition. The resulting façade and the handling of the cross are inviting and memorable. The interior space is organized by the entry volume, and through the use of compatible materials and details, the new and existing interiors appear as one.
Eons ago, a retreating glacial blade gouged a region through the center of North America known as the Great Plains. It left a vast and rugged beauty, an endless sky, and from it came peoples that are also enduring, pragmatic, and spare. More recently, German architect Gottfried Semper’s The Four Elements of Architecture appeared in 1851, about the same time that the U.S. and Canadian Homestead Acts were passed. Thousands of people, including my ancestors, came to start new lives and prove their land claim. Unknown to those homesteaders, Semper’s four building elements (the hearth, walling, roofing, and terracing) were essential to more than rudimentary shelter. His principles also applied to establishing communities, building houses of worship, and implanting a culture of respect for a place that was sometimes bountiful and unforgiving.

Long before Thomas Jefferson commissioned the Lewis and Clark Expedition through this region in 1804, fur-traders and indigenous peoples built structures that sustained life. Each preserved sacred sites and a deep reverence for this area. The natural evolution beyond survival mode brought building designs that reflected vernacular traditions and the practical realities dealt by the harsh extremes of bitter winters and blistering summers.

Now these homesteader descendants (like me)—whether we live in small towns, big cities, or maybe still live on “the home place”—continue that fierce love of the land and the dome of sky overhead. It has inspired writers and poets such as Willa Cather, Tom McGrath, Ted Kooster, Larry Woiwode, and Kathleen Norris. After all, the curvature of the earth is all that stands between infinity and me.

4-H JOHNSRUD EDUCATION CENTER • WASHBURN, NORTH DAKOTA • JLG Architects

PARK NICOLLET - STRUTHERS PARKINSON’S CENTER • GOLDEN VALLEY, MINNESOTA • EAPC Architects
We believe in more than just buildings - we believe architecture has the ability to make life better, and so we take a people-first, second, and third approach to everything we do. Function is the baseline, form is what lifts up the spirit, and innovation elevates the experience for our clients, their visitors, and the community as a whole. Our northern roots have given us an ingrained respect for the environment, and so we understand that proper stewardship of our resources not only brings economic reward but is the legacy we want to leave for the next generation. And we embrace hard work and opportunity, and are dedicated to doing what’s right in order to build lifelong relationships and become partners in our clients’ plan for success.
The University of North Dakota and JLG Architects have cooked up something completely different with a total transformation of Wilkerson Hall – so dramatically reimagined that the school decided to rename the 46-year old facility Wilkerson Commons – in order to bring new opportunities for student gathering and engagement while improving cost and resource efficiencies campuswide. JLG, along with consultants Solomon Cordwell Buenz and Robert Rippe & Associates, were charged with turning what the students had deemed a “dated, mess hall-style dining center” into a modern home-away-from-home with expanded and exciting food services, increased natural light to allow students to study and eat in natural daylight even on -30 degree days, and services that would elevate social experiences. The end result is an open, flexible, and colorful renovation and addition that now provides the greatest selection and variety of food options and dining atmosphere not found anywhere else on campus with student and social life amenities that have set a new standard in higher education across the state.
The University of North Dakota and JLG Architects have cooked up something completely different with a total transformation of Wilkerson Hall – so dramatically reimagined that the school decided to rename the 46-year old facility Wilkerson Commons – in order to bring new opportunities for student gathering and engagement while improving cost and resource efficiencies campuswide. JLG, along with consultants Solomon Cordwell Buenz and Robert Rippe & Associates, were charged with turning what the students had deemed a “dated, mess hall-style dining center” into a modern home-away-from-home with expanded and exciting food services, increased natural light to allow students to study and eat in natural daylight even on -30 degree days, and services that would elevate social experiences. The end result is an open, flexible, and colorful renovation and addition that now provides the greatest selection and variety of food options and dining atmosphere not found anywhere else on campus with student and social life amenities that have set a new standard in higher education across the state.
Housed in separate, aging facilities dispersed throughout the city of Williston - the Williams County Highway Department, Weed Control, and Vector Control were faced with increasing maintenance costs, a reduced job force, and limited service options. The new Williams County Highway Complex combines these departments in one facility to better meet all of their needs. A central ‘hub’ provides a common entrance and joint offices, conference, and break room spaces increase efficiency of use and access to greater amenities than they once had individually. Branching off the central hub are the wings housing maintenance, storage, and vehicle wash facilities for each department with extended access to the site. With a focus on longevity, materials and systems such as precast concrete walls and standing-seam metal roofing were selected to help the building age affordably.

The architect elevates this utilitarian facility to a new level through a design approach which emphasizes people and place.”

Kathy Achelpohl, AIA, Awards Juror

2016 PROFESSIONAL AWARDS

2016 TEST OF TIME AWARD
The Associated General Contractors (AGC) of North Dakota Headquarters Building

The AIA North Dakota Test of Time Award acknowledges the significant contribution of timeless design to our communities and state. These qualifications are fairly open-ended to allow for the distinctive project, cultural and iconic nature or a community’s reverence for a project over time.

Designed 50 years ago—in 1966 by Leonhard and Askew Architects—the building’s construction was also under their supervision. The building was to be a credit to the contracting industries in its authentic qualities and the proper use of building materials available at the time. This mid-century modern building demonstrates a materiality and scale that enables it to blend into the edge of the historic residential Cathedral District and the urban fabric of uptown Bismarck. Stylistically it features an elegant and unassuming rectangle form, both ribbon and expansive windows as well as a welcoming front entry.

Interior partitions include glass and clerestory openings while gorgeous natural woodworking details maintain the warmth of the space.

The original architectural drawings reflect the extent to which the interior layout was envisioned by the architects and qualities that are still present today.

This property, like much mid-century modern work regionally, displays a restrained but fastidious precision. Expressively honest and unadorned use of materials and balance are design techniques that characterize this timeless architectural work.

In a final Building Committee report, Warren Diederich wrote that the new headquarters is a tribute to the organization’s permanency, loyalty and good faith of each and every member.
2016 PROFESSIONAL AWARDS

2016 INTERN OF THE YEAR AWARD
Amanda Hagen, Assoc. AIA

The AIA North Dakota Intern of the Year Award is given to an intern who is a member in good standing as an Associate of AIA North Dakota and enrolled in the Intern Development Program (IDP). This individual, at the beginning of his/her career, has participated in AIA North Dakota events and has shown overall exceptional leadership in design, education, and service to the profession.

This year’s recipient, Amanda Hagen, Assoc. AIA, was nominated by David Shultz, AIA with Shultz + Associates Architects.

Amanda joined Shultz + Associates as a student intern in May of 2012, and began to demonstrate her passion for architecture and a diligent work ethic. Even as a student intern, Amanda quickly became an integral part of the Shultz team.

As a team player, she has taken on a role of mentorship to other interns in the office and is active in firm management. She sees the big picture – she can move from a planning discussion to developing detailed solutions. That, coupled with strong people skills, makes her invaluable as the firm develops architectural solutions in collaboration with our clients.

She is also involved in the community with an active committee role on Regional Workforce Study group of the FMWF Chamber of Commerce. That group develops strategies to attract and maintain the skilled workforce in the region and the State to align with the growth opportunities that are present.

Amanda is an exceptionally well-rounded Intern, with knowledge of design, leadership and client skills that are beyond what is the norm for her years in the profession. Her drive to continue to learn, and to have the vision of how our work as architects positively impacts the mission of clients will keep her on a path of providing continued value in the profession and clients served.
2016 PROFESSIONAL AWARDS

2016 EARLY CAREER ARCHITECT AWARD
Tony Wolf, AIA

The AIA North Dakota Early Career Architect Award is given to a licensed architect (registered in North Dakota 5 years or less as of August 1, 2016) who is a member in good standing. This individual, at an early stage of his/her career, has participated in AIA North Dakota events and has shown overall exceptional leadership in design, education, service to the profession.

This year’s recipient, Tony Wolf, AIA was nominated by Tim Zerr, AIA who is a Principal at Zerr | Berg Architects.

Tony has worked for Zerr Berg Architects for the past ten years including two years while still completing his studies at NDSU. Graduating in 2008 and becoming licensed in and NCARB certified in 2012 and 2013, he is an experienced and talented architect.

Tony has been involved in many successful projects with increasing responsibility as his level of experience grew. He has become a trusted Project Architect on large scale projects of all types including the Two Rivers Activity Center in Jamestown, ND, Four Bears Casino Event Center Addition in New Town, ND, and Lake Park-Audubon High School in Lake Park, MN. Tony assumes a strong leadership role in all aspects of the projects he is involved in, but easily transitions to serve as an excellent teammate on other projects as well.

Tony has become a well-rounded professional in every respect showing excellent skills both in the technical as well as the design aspect of each project. He works daily with clients and consultants to ensure the project is designed to the client’s expectations and is well coordinated. Tony has an extensive understanding of code and accessibility requirements and has a desire to share this knowledge with team members.

Tony and his wife Laura reside in West Fargo and together they have three children ages 5, 3, and 1-1/2 years.
2016 PROFESSIONAL AWARDS

2016 CRAFTSMANSHIP AWARD
Larry Larson with P2 Industries

This award acknowledges an individual or organization that is not an architect or a member of AIA but who has exemplified their continued commitment to excellence in craftsmanship and whose work or trade contributes to the built environment.

This year’s recipient, Larry Larson with P2 Industries, was nominated by Chris Hawley, AIA who is a Principal at Chris Hawley Architects.

With Larry’s career as an architectural fabricator and the establishment of his company, P2 Industries, it has been obvious from the start that he is an artist and a very special talent. Since that time, his work can be seen in many of our state’s best projects and more often than not, an integral part to many of our most celebrated work. Some of that work can be seen in AIA North Dakota’s most recent award winners such as The Starving Rooster, Skybarn, Fargo Laundry, Brew and the Loretta Building.

Larry’s abilities far exceed his peers in his attention to detail, his understanding of quality, his passion for all things handmade and his pursuit of “getting it right.” Given the state of “craft” in the built environment, working with Larry is a breath of fresh air and carries with it a “soul” to the work that is lost upon most. Larry’s attitude is best described by his often stated line, “Why buy it, when you can make it?” He brings “artisan” qualities, uncompromising craftsmanship and ingenuity to every project.
From vision through completion, Shultz + Associates facilitates a design process that engages our clients in developing a highly personalized solution elevating their mission.

AIA Master Agreements Are The Cure

Renegotiating contracts for each scope of service is time-consuming and results in project delays (and headaches!). AIA Master Agreements allow parties to agree on a predefined set of terms and conditions that will apply to multiple scopes of services, removing any renegotiation. Protect your project with AIA Contract Documents.

Get free samples of AIA Master Agreements at aia.org/b121sample
Supporting the Architectural and Building professionals in North Dakota for over 50 years.

From commercial to residential, historical to contemporary, new construction and replacement, Minot Builders Supply has the team to assist with your next project.
